

This document informs about the internship program at the Product Design Agency “El Domo” for a local or virtual internship in Product Design, Concept Design and the other services.

Available Projects:

1. Open-Source Passive Fridge for Rural Areas
2. Open-Source Passive Oven For Rural Areas
3. Open-Source Water Filter for Rural Areas
4. Open-Source Chicken Tractor
5. Open-Source Cabin

Project Selection Process:

We talk to the student or attendee and based on that talk and what El Domo find it possible to do, we choose the project.

The student or attendee cannot choose a project or change the chosen one.

Students / Attendees Selection Process:

For university or school students, there are two ways. The first is that the students contact El Domo and asks for the internship and connect it with the internship office at the university or school to discuss the possibility. The second is that the university build the connection with El Domo and a relationship for a period of time to receive many students.

For any other, contact El Domo directly to discuss this possibility.

Basic English is a “must to have”, but also German or Arabic is possible.

The selected student or attendee should be respectful, responsible, direct and able to work and communicate as required. Meeting at 01:00 means meeting at 01:00, and not at 01:15 or even later. Respecting the time is the most important thing.

Any type of bad behaviors such as racism, hate, or any other cannot be accepted and could result to cancel the internship at any time.

Each student or attendee will be known on the website of El Domo with the information of the project and the results if available and open-source.

Duration:

We accept internship students or attendees for a duration of at least 80 hours.

Responsibility:

Responsible for this offer is El Domo (www.el-domo.com) and the founder Mohsen Abbasi.
